Ref. No. ISO 4200-1981 (E)

Descriptors : piping, pipes (tubes), precision tubes, steel tubes, welded tubes, seamless tubes, smooth tubes, dimensions, linear density, diameters, classification.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 4200 was developed by Technical Committee ISO/TC 5, *Ferrous metal pipes and metallic fittings*.

The first edition (ISO 4200-1980) had been approved by the member bodies of the following countries :

Australia	Germany, F. R.	South Africa, Rep. of
Austria	Hungary	Spain
Belgium	India	Sweden
Chile	Israel	Switzerland
Czechoslovakia	Italy	United Kingdom
Denmark	Korea, Rep. of	USA
Egypt, Arab Rep. of	Mexico	USSR
Finland	Netherlands	
France	Norway	

The member bodies of the following countries had expressed disapproval of the document on technical grounds :

Brazil
Canada
Japan
Romania

This second edition, which cancels and replaces ISO 4200-1980, incorporates draft Amendment 1, which was circulated to the member bodies in December 1980 and has been approved by the member bodies of the following countries :

Austria	Iraq	Norway
Brazil	Ireland	Poland
Czechoslovakia	Israel	Romania
Egypt, Arab Rep. of	Italy	South Africa, Rep. of
Finland	Japan	Spain
France	Korea, Dem. P. Rep. of	Sweden
Germany, F. R.	Korea, Rep. of	Switzerland
Hungary	Netherlands	United Kingdom
India	New Zealand	USA

No member body expressed disapproval of the document.

This International Standard cancels and replaces International Standards ISO 64-1974, ISO 134-1973, ISO 336-1976, ISO 560-1975, and Technical Report ISO/TR 3311-1974, of which it constitutes a technical revision.

Plain end steel tubes, welded and seamless — General tables of dimensions and masses per unit length

0 Introduction

This International Standard has two main purposes :

- to give guidance on the selection of sizes for all activities concerned with the standardization of steel tubes, both nationally and internationally;
- to serve as a ready reckoner and to avoid the use by different countries of different masses for a tube of the same size.

1 Scope and field of application

This International Standard gives tables of dimensions in millimetres and the masses per unit length in kilograms per metre of plain end steel tubes.

It covers two groups of tubes :

- Group 1 : tubes for general purpose use;
- Group 2 : precision tubes.

The outside diameters are classified into three series for group 1 and into two series for group 2.

The classification of outside diameters and the selection of preferred thicknesses offers information on which tube dimensions should be selected for national and international standards for either general purposes or particular use and application. The use of this information will ensure the selection of the most favourable dimensions for particular purposes.

It should be noted that the inclusion in the tables of a mass for a given size of tube, which does not have a series 1 outside diameter and preferred thickness, does not necessarily mean that it is available.

Should the mass of a tube of dimensions other than those given in the table be required, it shall be calculated by the formula given in clause 5.

This International Standard is not applicable to tubes primarily intended to be screwed in accordance with ISO 7/1. The masses of such tubes, both screwed and plain end, are given in ISO 65.

2 References

ISO 7/1, *Pipe threads where pressure-tight joints are made on the threads — Part 1: Designation, dimensions and tolerances.*¹⁾

ISO 65, *Steel tubes suitable for screwing in accordance with International Standard ISO 7/1.*

ISO 3305, *Plain end welded precision steel tubes — Technical conditions for delivery.*

ISO 3306, *Plain end as-welded and sized precision steel tubes — Technical conditions for delivery.*

3 Classification of outside diameters

In International Standards on steel tubes, the outside diameters of tubes shall be classified into three series defined as follows :

- **Series 1** : Series for which all the accessories needed for the construction of piping systems are standardized.
- **Series 2** : Series for which not all accessories are standardized.
- **Series 3** : Series for special application for which very few standardized accessories exist; some of these diameters may be withdrawn in due course.

4 Selection of preferred dimensions for tubes of group 1

4.1 General

Tables 1 and 2 specify seven ranges of preferred thicknesses, related to series 1 outside diameters, based upon the principle of isobaric series and applicable to tubes and butt-welding accessories; the three strongest ranges are common to all steel grades. The four ranges of thicknesses in table 1 are in use for tubular products of non-alloy and alloy steels, and the six ranges of thicknesses of table 2 are in use for stainless steel tubular products.

1) At present at the stage of draft. (Revision of ISO 7/1-1978.)

4.2 Non-alloy and alloy steel tubes

Table 1 gives a reduced selection of dimensions standardized and available for tubes and accessories in ordinary steel; series D, however, is not applicable to butt-welding fittings.

Table 1 — Dimensions for tubes and accessories in non-alloy or alloy steels

Dimensions in millimetres

Outside diameter series 1	Preferred thicknesses for series				
	D*	E*	F	G	
10,2		1,6			
13,5	1,6	2			
17,2	1,6	2			
21,3	1,8	2	3,2	4	
26,9	1,8	2	3,2	4	
33,7	2	2,3	3,2	4,5

813	4		8			
914	4		8,8			
1 016	4		10			

* Selection of thickness according to the former ISO 134.

5 Method of calculation of masses per unit length

The values, to at least five significant figures, have been calculated by the formula given below, and then rounded to three significant figures for values below 100, and to the nearest whole number for larger values.

$$M = (D - T) \times T \times 0,024\,661\,5^1) \text{ kg/m}$$

where

M is the mass per unit length;

D is the specified outside diameter, in millimetres;

T is the specified thickness, in millimetres.

The calculated values may also be applied to tubes of steels having different density values, but they require to be multiplied by a factor

- 1,015 for austenitic stainless steels;
- 0,985 for ferritic and martensitic stainless steels.

6 Dimensions and masses per unit length

6.1 Group 1

Table 3 gives the dimensions and masses per unit length of non-alloy or alloy steel tubes for general purpose use and for use as components of piping systems.

The values of masses per unit length printed in heavy type correspond to tubes of series 1 outside diameters and the preferred thicknesses of series A, B, C, D, E, F and G respectively.

For use as components of piping systems, it is recommended to apply only those dimensions given in table 3, series 1 outside diameters.

6.2 Group 2

Tubes having the dimensions given in table 4 are precision steel tubes to ISO 3304, ISO 3305 and ISO 3306. They are primarily not for use as components of piping systems.

1) This coefficient takes into account a density equal to 7,85 kg/dm³.
